Our website provides information about any travel destination like the culture and heritage and the things to look out for in any place on the globe. It is meant for people to discover new locations and learn about them.

It is primarily catered to young enthusiastic travellers, who would want to explore the entire globe, but often find that they have to google down every information they want about any place.

It is also useful for first-time travellers who would want to get a brief idea about their travel destination.

The main functionalities we plan on including on our website is:

- Listing a few most popular and most visited travel destinations
- Providing spots on the entire map where users could click on to get more information regarding that destination like Culture, Iconic travel locations in that area, Cuisine, and many more...
- Providing a search option for users to search based upon location, culture, or cuisine depending upon their preference

We distinguish our travel website from the existing ones as our website is focused on providing information pertaining to core attraction spots and landmarks rather than on hotels and flight reservations.
